

Here are the following steps to setup dephijustin TeamSpeak Chat client on windows(this tutorial is proabbly similar to the Linux client).

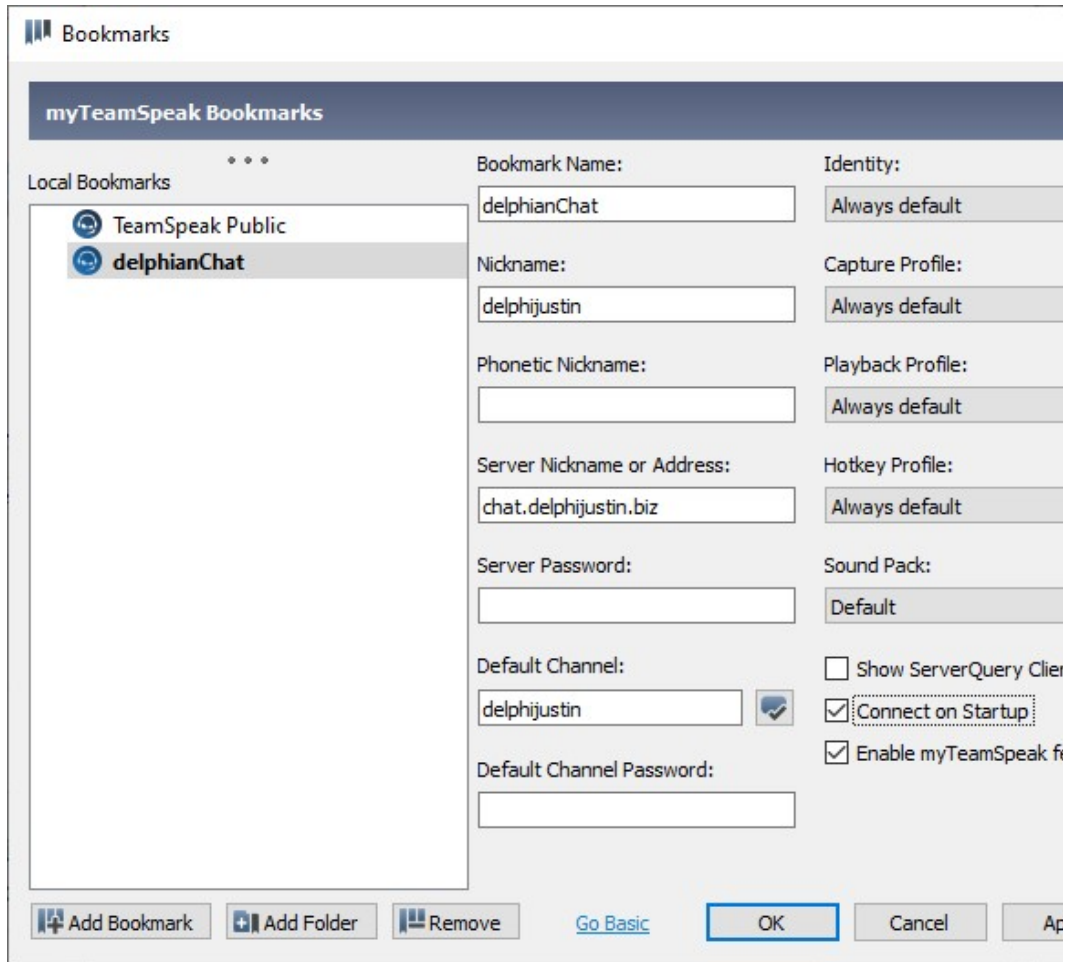

1. Download and install TeamSpeak client from <https://teamspeak.com/en/downloads/>
On the license agreement you will have to scroll down to the bottom of page before it allows you to click I accept. Also you don't need to install overwolf
2. After installing a big window will popup about priacy policy and license agreement read or scroll down to the bottom of the page then click i accept. NOTE THE I ACCEPT BUTTON MAY BE COVERED BY THE WINDOWS TASKBAR, IF SO JUST DRAG THE WINDOW UP. Also you don't need myteamspeak account.
3. Click Continue without logging in button

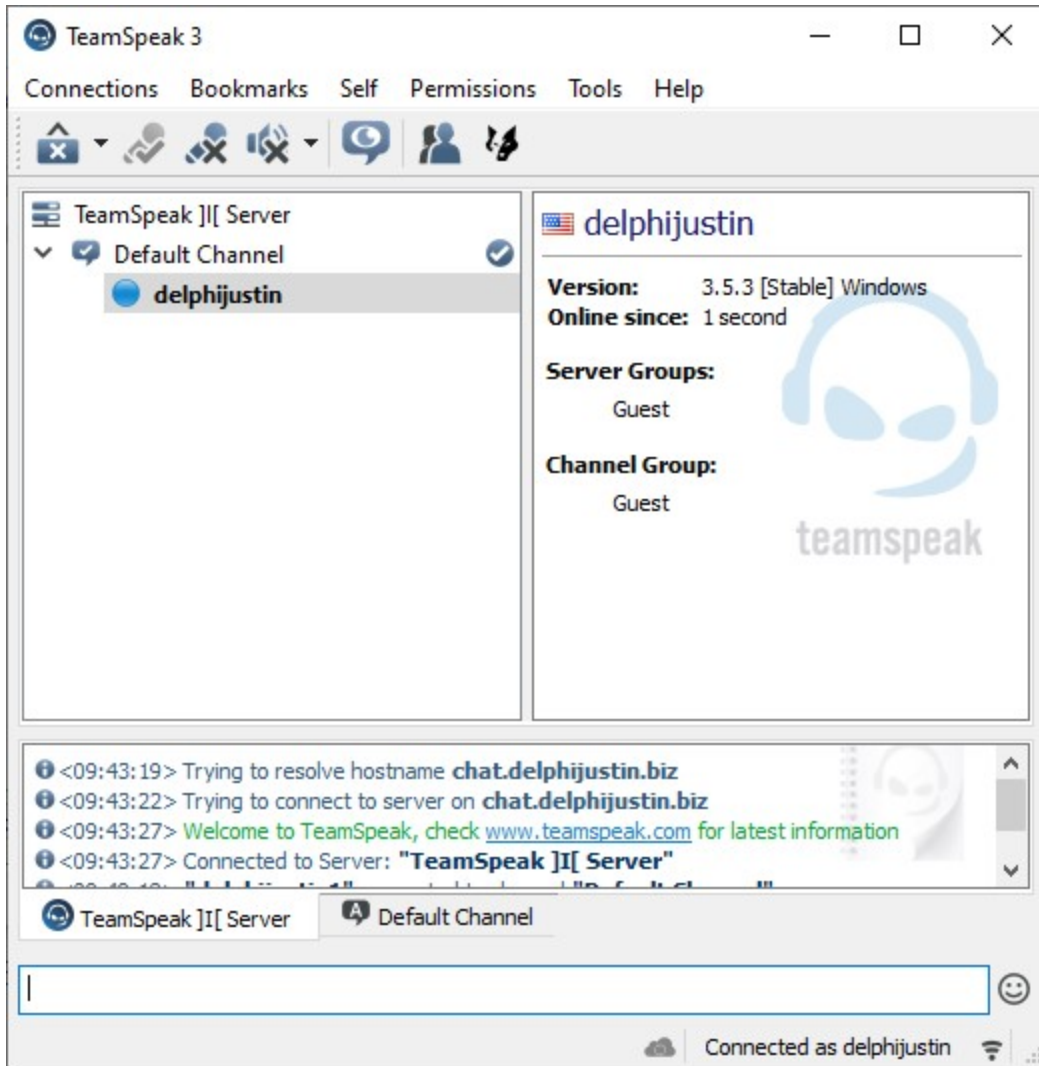

4. Type in a nickname you would like to be known as on TeamSpeak
5. Click Bookmarks then Manage Bookmarks
6. Click Add Bookmark button then click Go Advanced link right by Remove and OK Button

7. Make the settings match mine except for Nickname then click the OK Button on Page 3

8. To connect for the first time click Bookmarks then delphianChat
9. If your window looks similar to this then everything went well.

You may want to set a push to talk hotkey, this make you can choose when the microphone is used, also it could help the quality.

To set that up click Tools then Options then Capture
